Abstract

Immunologically active proteins I-PC2 of Imunoinstant group have been used in the treatment of Staphylococcus aureus Methicillin-resistant Staphylococcus aureus (MRSA) nosocomial infections on patients after surgical interventions and on psoriasis patients with Staphylococcus aureus MSSA- (Methicillin-sensitive Staphylococcus aureus) or MRSA-infected plaques. Staphylococcus aureus MRSA- and MSSA-infections were successfully cured with IMUNOINSTANT products used as such, without antibiotics.
