

**Knowing, developing and applying the global *One Health* concept. Significance of the concept in improving the health status, and reducing the diseases incidences and mortality, both for humans and animals**

**ONE HEALTH WHITE CHART**

**Nicolae Manolescu<sup>1a</sup>, Mircea Ifrim<sup>b</sup>, Virgil Nadolu<sup>a</sup>,**

*a) ONE HEALTH New Medical Concept Association, Romania*

*b) Romanian Academy of Medical Sciences*

*Starting from the most significant historical moments of the birth of the One Health concept, the authors review its continuous development to the now existing global concept. The main six components of the concept are detailed in regards their goals and tasks for the implementation of the concept, both in Romania, EU, and whole world. Using the new concept, very significance results in improving the health status, and reducing the diseases incidences and mortality, both for humans and animals, would be soon obtained.*

**Key words:** *one health, environment, zoonoses, comparative oncology*
